1.0 EXECUTIVE SUMMARY

This report presents the 2014 Decommissioning Cost Estimate (DCE) Study of the San Onofre Nuclear Generating Station (SONGS) Units 2 & 3, hereinafter referred to as the 2014 Cost Study. The San Onofre Nuclear Generating Station is operated by the Southern California Edison Company (SCE).

On June 7, 2013, SCE announced its intention to permanently cease power generation operations and shut down SONGS Units 2 & 3. Units 2 & 3 had not produced power since January 9, 2012 and January 31, 2012, respectively. SCE now has the responsibility to decommission the site. In January 2014 SCE contracted with Energy*Solutions* to evaluate decommissioning alternatives and assist in the development of a detailed project schedule and DCE to support the preparation and submittal of a Post Shutdown Decommissioning Activities Report *PSU* R) in accordance with 10 CFR 50.82(a)(4)(i), which requires that a PSDAR be submined within two years following the permanent cessation of operations.

This study has been performed to furnish an estimate of the costs for (1) decommissioning SONGS Units 2 & 3 to the extent required to terminate $t^1 \circ p_1$, t^2s operating license pursuant to 10 CFR 50.75(c); (2) post-shutdown management of pent fue until acceptance by the U.S. Department of Energy (DOE) pursuant to 10 CFR 50.54(b); (3 clean demolition of structures and restoration of the site in accordance with the United S for Department of Navy Grant of Easement (Ref. No. 14); and the California State L and's Commission easement (Ref No. 15); and (4) Independent Spent Fuel Storage Installation ISFS decommissioning pursuant to 10 CFR 72.30. This study includes SCE's actual for S in the transitional periods following cessation of permanent operations on Jun. 7, 20 3 unit December 31, 2013. Costs presented herein commencing on January 1, 2014 an estimated.

Accordingly, the costs and schedule for all activities are segregated for regulatory purposes as follows: costs for "License Tern natio," (10 CFR 50.75(c)); costs for "Spent Fuel Management" (10 CFR 50.54(bb)); costs for "Sr Restoration" (clean removal and site restoration) final site conditions; and costs for "ISFAI Decommissioning" (10 CFR 72.30). Energy*Solutions* has established a Work B1 ako. Structure (WBS) and cost accounting system to differentiate between these project for units.

This study analyzes the following technical approach to decommissioning as defined by SCE and the co-owners:

- DECON methodology.
- Permanent cessation of operations on June 7, 2013.
- Termination of spent fuel pool operation six years after permanent shutdown.
- Spent fuel will be stored in Multi-Purpose Canisters (MPCs) at an on-site Independent Spent Fuel Storage Installation (ISFSI).
- A dry transfer facility will not be necessary.
- DOE begins accepting spent fuel from the industry in 2024 and completes the removal of all SONGS spent fuel by 2049.
- Decommissioning will be performed by SCE and a Decommissioning General Contractor (DGC).
- Incorporation of Life-of-Plant (LOP) Disposal Rates for Class A Low-Level Radioactive Waste (LLRW).

 Incorporation of disposal rates for Class B and C LLRW based on recent quotes for disposal at the Waste Control Specialists LLC (WCS) site in Andrews County, Texas.

The cost estimate results are provided in Table 1-1. Table 1-1 gives License Termination costs (which correspond to 10 CFR 50.75 (c) requirements); Spent Fuel Management costs (which correspond to 10 CFR 50.54 (bb) requirements); and Site Restoration costs (which correspond to activities such as clean building demolition and site grading and end-state preparation as required under the Site Easement).

(2014 Dollars in Thousands)			
Cost Account	Unit 2		Total
License Termination 50.75(c)	\$1,034,230	\$1,078, 11F	\$2,112,246
Spent Fuel Management 50.54(bb)	\$623 [~] JY	\$L ⁵ 2,987	\$1,276,196
Site Restoration	\$42, 297	599,507	\$1,022,804
Totals	\$2,080,73.	2,330,511,	\$4,411,246

Table 1-1Decommissioning Cost Summary1(2014 Dollars in Thousands)

The estimate is based on site-specific plott vstem and buildings inventories. These inventories, and EnergySolutions' propriets y Unit Cest Factors (UCFs), were used to generate required manhours, activity schedule hours and costs, and waste volume, weight, and classification. Based on the activity schedule hours and a decommissioning activities analysis, a Critical Path Method (CPM) and with was performed to determine the decommissioning schedules. These schedules reflects of sequenced activity-dependent or distributed decommissioning elements much as planning and preparations, major component removal, building decontamination, and spent fuel shipping. The schedules are divided into project phases (periods) and presented at not d previously, by cost account "License Termination," "Spent Fuel Management of the Restoration." The summary schedule is shown in Figure 1-1, and may also be found and Section 6.0 of this report.

¹ Rows and columns may not add correctly due to rounding.

2.0 INTRODUCTION

2.1 Study Objective

This report presents the 2014 Decommissioning Cost Estimate Study of the San Onofre Nuclear Generating Station (SONGS) Units 2 & 3, hereinafter referred to as the 2014 Cost Study. The San Onofre Nuclear Generating Station is owned by the Southern California Edison Company (SCE), San Diego Gas & Electric Company, and the City of Riverside. A former owner, the City of Anaheim, also has liability for decommissioning. SCE has provided the following information regarding the liability by owner for SONGS decommissioning costs:

Cost Categories	<u>Owners</u>			
	SDG&E	Riverside	Anah, `a	SCE
SONGS 1	20%	0%	0%	80%
SONGS 2	20%	1.79%	2.4731%	75.7363%
SONGS 3	20%	1. '9%	2.4625%	75.7475%
Common Facilities	20%	1.79%	2.4681%	75.7419%
SONGS 1 Fuel	20%	.%	0%	80%
SONGS 2/3 Fuel	20.	<i></i>	2.3398%	75.8702%
ISFSI Maintenance and D&E	205	1.6066%	2.2686%	76.1248%

This study has been performed to support the development of a site-specific PSDAR and furnish an estimate of the codes for (1) ecommissioning SONGS Units 2 & 3 to the extent required to terminate the plant's performation license, (2) post-shutdown management of spent fuel until acceptance by the CS Department of Energy (DOE), (3) clean demolition of structures and restoration of the site in a cordance with the U.S. Department of Navy Grant of Easement (Ref. No. 14), and the Codeformia State Lands Commission easement, and (4) Independent Spent Fuel Storage Installation (ISFSI) decommissioning. This study also includes SCE's actual costs incurred in the transitional periods following cessation of permanent operations until December 31, 2013. Estimated costs begin on January 1, 2014.

The study methodology follows the basic approach originally presented in the Atomic Industrial Forum/National Environmental Studies Project Report AIF/NESP-036, "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates," (Ref. No. 2). The report was prepared in accordance with Nuclear Regulatory Commission (NRC) Regulatory Guide 1.202, "Standard Format and Content of Decommissioning Cost Estimates for Nuclear Power Reactors," (Ref. No. 3). The estimate is based on compliance with current regulatory requirements and proven decommissioning technologies.

NRC requirements, set forth in Title 10 of the Code of Federal Regulations (CFR), differentiate between the post-shutdown costs associated with the decommissioning of the nuclear plant

facility, those associated with storage of spent fuel on-site, and those associated with the decommissioning of the spent fuel storage facility. The Code of Federal Regulations, however, does not address the entire scope of the decommissioning liability for each nuclear facility. 10 CFR 50.75(c) requires funding by the licensee(s) of the facility for the decommissioning program, but specifically excludes the cost of removal and disposal of spent fuel and of clean structures. 10 CFR 50.75(c) also excludes the cost of site restoration activities that do not involve the removal of residual radioactivity necessary to terminate the NRC license(s). 10 CFR 50.54 (bb) requires funding by the licensee(s) "for the management of all irradiated fuel at the reactor upon expiration of the reactor operating license(s) until title to the irradiated fuel and possession of the fuel is transferred to the Secretary of Energy for its ultimate disposal in a repository." 10 CFR 72.30 requires funding for decommissioning of the on-site spent fuel storage facility after the irradiated fuel is accepted by the DOE.

This study analyzes the following technical approach to decommissioning as 'efined by SCE and the co-owners:

- DECON methodology.
- Permanent cessation of operations on June 1, 2015
- Termination of spent fuel pool operation si. years a ter permanent shutdown.
- Spent fuel will be stored in transportable M¹ti^{-/} urpose Canisters (MPCs) at an on-site Independent Spent Fuel Storag Installation (ISFSI).
- A dry transfer facility will not be n cessa v.
- DOE begins accepting spent fuel from in industry in 2024 and completes the removal of all SONGS spent fuel of 2049
- Decommissioning will be performed by SCE and a Decommissioning General Contractor (DGC).

In addition, this study includes *t* e for wing assumptions:

- Incorpotation of Energy Solutions' Life-of-Plant (LOP) Disposal Rates for Class A Low-Level K diopetive Waste (LLRW), (Ref. No. 7).
- Inco po. then of disposal rates for Class B and C LLRW based on recent quotes
 The posal at the Waste Control Specialists LLC (WCS) site in Andrews County, Texa.

2.2 Regulatory Framework

Provisions of current laws and regulations affecting decommissioning, waste management, and spent fuel management are as follows:

- 1. NRC regulations require a license for on-site storage of spent fuel. Wet storage in a spent fuel pool is authorized by a facility's 10 CFR Part 50 license. On-site dry storage of spent fuel at an Independent Spent Fuel Storage Installation (ISFSI) is licensed by either: (a) the general license set forth in 10 CFR 72.210, which requires that a Part 50 license be in place; or (b) a site-specific ISFSI license issued pursuant to 10 CFR Part 72.
- 2. 10 CFR 50.75(c) requires funding by the licensee(s) of the facility for decommissioning.

- 3. 10 CFR 50.54 (bb) requires the licensee(s), within two years following permanent cessation of operation of the reactor or five years before expiration of the operating license(s), whichever occurs first, to submit written notification to the NRC for its review and preliminary approval of the program by which the licensee intends to manage and provide funding "for the management of all irradiated fuel at the reactor upon expiration of the reactor operating license until title to the irradiated fuel and possession of the fuel is transferred to the Secretary of Energy for its ultimate disposal in a repository."
- 4. 10 CFR 961 (Ref. No. 4), Appendix E, requires spent fuel to be cooled for at least five years before it can be accepted by DOE.
- 5. 10 CFR 72.30 requires funding by the licensee(s) for termination of the ISFSI license.

Decommissioning Alternatives

The three basic methods for decommissioning are DECON, 5. FS OR, and ENTOMB, which are summarized as follows:

- 1. DECON: The equipment, structures, and po, ions of the facility and site that contain radioactive contaminants free romptly removed or decontaminated to a level that permits termination of the licer of after cessation of operations.
- 2. SAFSTOR: The facility is r^1 ced h a soft, stable condition and maintained in that state (safe storage). The facility is decontaminated and dismantled at the end of the storage period to even that permit license termination. NRC regulations require decommission h_{e_0} to be completed within 60 years of cessation of operation.
- 3. ENTOMB: Kalioa tive structures, systems, and components are encased in a structure lly long-1 ved substance, such as concrete. The entombed structure is appropriately maintained and monitored until radioactivity decays to a level that permits is indication of the license. Since entombment will exceed the requirement is a commissioning to be completed within 60 years of cessation of operation, NRC⁺ ndles entombment requests on a case-by-case basis.

Post-Shutdown Spent Fuel Management Alternatives

The options for long-term post-shutdown spent fuel management currently available to power plant operators are (1) wet storage consisting of continued maintenance and operation of the spent fuel pool, and (2) dry storage consisting of transfer of spent fuel from the fuel pool to onsite dry storage modules after a cooling period. Maintaining the spent fuel pool for an extended duration following cessation of operations prevents termination of the Part 50 license and typically has a higher annual maintenance and operating cost than the dry storage alternative. Transfer of spent fuel to an ISFSI requires additional expenditures for purchase and construction of the ISFSI and dismantlement and disposal of the ISFSI following completion of spent fuel transfer to DOE. The spent fuel shipping schedules furnished by SCE for this study are based on projections that DOE will commence accepting spent fuel from domestic commercial nuclear power plants in 2024, and that the DOE will accept spent fuel at the rate published in DOE's July 2004 Acceptance Priority Ranking & Annual Capacity Report (DOE/RW-0567) (Ref. No. 12). These assumptions are in accordance with SCE testimony to the Public Utilities Commission of the State of California (Ref. No. 17).

3.0 STUDY METHODOLOGY

3.1 General Description

Energy*Solutions* maintains a proprietary decommissioning cost model based upon the fundamental technical approach established in AIF/NESP-036, "Guidelines for Producing Commercial Nuclear Power Plant Decommissioning Cost Estimates," dated May 1986 (Ref. No. 2). The cost model has been updated frequently in accordance with regulatory requirements and industry experience. The cost model includes elements for estimating distributed and undistributed costs. Distributed costs are activity specific and include planning and preparation costs as well as the decontamination, packaging, disposal, and removal of major components and systems. For example, the segmentation, packaging, and disposal of the Actor internals is a distributed cost. Undistributed costs, sometimes referred to as collateral costs, re typically time dependent costs such as utility and decommissioning general contractor cost, property taxes, insurance, regulatory fees and permits, energy costs, and security staf.

The methodology for preparing cost estimates for a selected decommissioning alternative requires development of a site-specific detailed work ctivity sequence based upon the plant inventory. The activity sequence is used to define be labored material, equipment, energy resources, and duration required for each activity. In the case remajor components, individual work sequence activity analyses are performed based on the physical and radiological characteristics of the component, and the pa kage g, transportation, and disposal options available.

In the case of structures and small components and equipment such as piping, pumps, and tanks, the work durations and costs are calculated used on UCFs. UCFs are economic parameters developed to express costs per unit of work output, piece of equipment, or time. They are developed using decommissioning experience, information on the latest technology applicable to decommissioning, and engineering judgment. The total cost of a specific decommissioning activity can be determined by in Utrylying the total number of units associated with that activity by the UCF, expressed as viunt for that activity. For example, the estimated demolition cost of a non-contaminated concrete structure can be obtained by multiplying the volume of concrete in the structure by the UCF has associated with it a man-hours/unit and schedule-hours/unit. From these values, usual man-hours and total schedule-hours can be determined for a particular activity.

3.2 Schedule Analysis

After the work activity durations are calculated for all distributed activities, a critical path schedule analysis is performed using MS Project. The schedule accounts for constraints such as spent fuel cooling periods and regulatory reviews. The schedule is typically delineated into phases or time periods (hereinafter referred to as period or periods) that differentiate manpower requirements and undistributed costs.

In order to differentiate between License Termination, Spent Fuel, and Site Restoration elements of the entire decommissioning scope of work, Energy*Solutions* has established a Work Breakdown Structure (WBS) and cost accounting system to treat each element as a subproject. Accordingly, the overall project schedule is divided into interrelated periods with major

milestones defining the beginning and ending of each period. The major milestones also serve as the basis for integrating the periods of the four subprojects.

3.3 Decommissioning Staff

Energy*Solutions*' has assumed that the SONGS Units 2 and 3 decommissioning project will be performed in an efficiently planned and executed manner using project personnel experienced in decommissioning. This DCE assumes that the decommissioning will be performed by a highly experienced and qualified DGC, with oversight and management of the decommissioning operations performed by the Utility staff. It is also assumed that the Utility staff will be supplemented by a professional consulting engineering firm, particularly in the planning and preparation phase.

Energy*Solutions* analyzed the SONGS operational staff and developed a ite-specific staffing plan. The SCE existing salary structure was then used as the basis or including Utility staff labor costs. Energy*Solutions* used industry data to develop DGC s lary cos s.

Staffing levels, for both staffing plans and for each p oject p rioc are based on the Atomic Industrial Forum (AIF) guidelines and industry experience. The sizes of the staffs are varied in each period in accordance with the requirements of the vort activities. Staffing has been organized into the following departments or functional groups.

- Decommissioning
- Engineering
- Maintenance and Work Com. 1
- Operations
- Oversight and Nucl. ar Cafety
- Radiation Protect on a. 1 Chemistry
- Regulatory and El. ergency Planning
- Safety and Juma Performance
- Security Ac pinist ation
- Se . "ty Cuara Force
- Site Man, ment and Administration
- A 'dit onal Staff for Spent Fuel Shipping
- DGC Laff

3.4 Waste Disposal

Waste management costs comprise a significant portion of the decommissioning cost estimate. Additionally, limited future access to disposal sites licensed for receipt of Class B and C wastes introduces a significant level of uncertainty with respect to the appropriateness of using existing rate structures to estimate disposal costs of these wastes. Energy*Solutions*' approach to estimating waste disposal costs is discussed in the following paragraphs.

Waste Classification

Regulations governing disposal of radioactive waste are stringent in order to ensure control of the waste and preclude adverse impact on public health and safety. At present, LLRW disposal is controlled by 10 CFR 61, which went into effect in December 1983. This regulation stipulates

the criteria for the establishment and operation of shallow-land LLRW burial facilities. Embodied within this new regulation are criteria and classifications for packaging LLRW such that it is acceptable for burial at licensed LLRW disposal sites.

For each waste classification, 10 CFR 61 stipulates specific criteria for physical and chemical properties that the LLRW must meet in order to be accepted at a licensed disposal site. The LLRW disposal criteria of 10 CFR 61 require that LLRW generators determine the proportional amount of a number of specific radioactive isotopes present in each container of disposable LLRW. This requirement for isotopic analysis of each container of disposable LLRW is met by employing a combination of analytical techniques such as computerized analyses based upon scaling factors, sample laboratory analyses, and direct assay methods. Having performed an isotopic analysis of each container of disposable LLRW, the waste *r* has then be classified according to one of the classifications (Class A, B, C, or Greater That Classified Classified in 10 CFR 61.

Energy Solutions' classification of LLRW resulting from decommostioning activities is based on AIF/NESP-036 (Ref. No. 2), NUREG/CR-0130 (Ref. No. 5) N IREG/CR-0672 (Ref. No. 6), and recent industry experience. The estimated curie content of $v_{\rm c}$ are conversed and internals at shutdown is derived from NUREG/CR-0130 for Predurized Water Reactors (PWRs) and NUREG/CR-0672 for Boiling Water Reactors (BWRs), and $v_{\rm c}$ justed for the different mass of components and period of decay.

Packaging

Selection of the type and quantity of contain, is required for Class B and C wastes is based on the most restrictive of either curie content, a senate, container weight limit, or container volume limit. GTCC wastes from segmen at an of the reactor vessel internals is packaged in spent fuel canisters. The selection of container are able for Class A waste is based on the transportation mode (rail, truck, barge, etc.) and waste form. The quantity of Class A waste containers is determined by the most restrictive of either container weight limit or container volume limit. Large components, such as standard and rene ators, pressurizers, and reactor recirculation pumps, are shipped as their own containers v ith additional shielding as required.

Container costs ... btained from manufacturers. Shielded transport cask and liner costs are obtained from the cask owners and operators.

Transportation

Transportation routes to processing and disposal facilities are determined based on available transportation modes (truck, rail, barge, or combinations). Transportation costs for the selected routes and modes are obtained from vendor quotes or published tariffs whenever possible.

Class A Disposal Options and Rates

In accordance with the existing Life-of-Plant Disposal Agreement (Ref. No. 7), all Class A waste that meets the Clive facility waste acceptance criteria is to be disposed of at Clive. All reported waste disposal costs include packaging, transportation, and any applicable surcharges.

Class B and C Disposal Options and Rates

Currently, within the United States, there are only three operational commercial disposal facilities licensed to accept Class B and C LLRW: the Barnwell facility, operated by Energy*Solutions* in Barnwell, South Carolina; the U.S. Ecology facility in Richland, Washington; and the recently licensed facility in Andrews County, Texas operated by Waste Control Specialists. Barnwell only accepts waste from states within the Atlantic Compact and U.S. Ecology only accepts waste from states within the Northwest and Rocky Mountain Compacts. However, the WCS facility will accept waste from the Texas Compact (comprised of Texas and Vermont) and from non-Compact generators. The Texas Compact Commission on March 23, 2012 approved amendments to rules allowing the import of non-compact generator LLRW for disposal at the Andrews County facility.

Greater Than Class C (GTCC)

Wastes identified as 10 CFR 61 Class A, B, and C may be disposed c at near-surface disposal facilities. Certain components are highly activated and now exceed the radionuclide concentration limitations for 10 CFR 61 Class C waster. In accordance with 10 CFR 61, these components cannot be disposed of in a near-surface LRW lisposal facility and must be transferred to a geologic repository or a similar site approved by the NRC.

Highly activated sections of the reactor vessel in ernal will result in GTCC waste. Presently, a facility does not exist for the disposal of waste exceeding 10 CFR 61 Class C limitations. Energy *Solutions* assumes that the DOE will acc of this waste along with spent fuel. Although courts have held that DOE is obligated to account and dispose of GTCC, issues regarding potential costs remain potentially unsettled. Therefore, Energy *Solutions* conservatively estimates a GTCC waste disposal cost. Energy *Solution n*, assumes that the GTCC waste will be packaged in spent fuel canisters and will be shipped to storage or disposal facility operated by DOE along with the spent fuel. Additionally Energy *Solutions* assumes shipping costs for GTCC waste to be equivalent to the commercial control of shipping a Type B licensed, shielded cask such as the CNS 8-120B cask, which is wind an operated by Energy *Solutions*.

LLRW Volume Re Juch

Based on current Class A LLRW disposal rates, Energy*Solutions* does not assume on-site volume reduction techniques such as waste compaction or an aggressive decontamination, survey and release effort. These activities are not currently considered to be cost effective over disposal.

Non-Radioactive Non-Hazardous Waste Disposal

Energy*Solutions* assumes that recyclable, non-radioactive scrap metal resulting from the decommissioning program will be transported to a scrap metal dealer. However, no credit is assumed in the estimate for the value of the scrap metal. Clean concrete and demolition debris is assumed to be removed off site to an out of state Class III landfill consistent with the Governor of the State of California Executive Order D-62-02. This study includes the costs of installation and operation of Energy*Solutions*' <u>GAmma Radiation Detection and In-container ANalysis or GARDIAN System</u>. The GARDIAN System performs radiological assays of bulk shipping

containers. The GARDIAN System is a cost effective and efficient means to ensure all nonradiological waste and recyclable materials arising from the decommissioning and demolition of the SONGS' site comply with all applicable regulatory requirements.

Hazardous and Industrial Waste Disposal

Uncontaminated lead shielding remaining after shutdown was assumed to be removed from its installed locations and shipped offsite by entities having a need for the material. The entities will receive the lead at no charge in return for providing the removal and shipping services. Non-Radioactive contaminated surfaces coated with lead based paint will be removed as non-hazardous building demolition debris. All other chemicals and hazardous materials present at shutdown will be removed and properly disposed of during decommission and

3.5 Final Status Survey

The cost of performing a final status survey (FSS) is based on 'UR'.G- 575, "Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM), (Rel. No. 8). Estimates of MARSSIM Class I, II, and III survey designations is basing to radiological assumptions regarding contamination resulting from small and large puppenent removal activities. The FSS activity cost calculation includes the in-place remote survey of inderground metal and concrete pipe, soil, and groundwater sampling and analysis Estimated costs for NRC and Oak Ridge Institute for Science and Education (ORISE) verification are also included, and the NRC review period is incorporated into the project schedule.

3.6 Contingency

Contingencies are applied to co.* (stimates primarily to allow for unknown or unplanned occurrences during the actual program, e.g., increased radioactive waste materials volumes over that expected; equipment breake which, weather delays, and labor strikes. This is consistent with the definition provided in the LOE Cost Estimating Guide, DOE G 430.1-1, 3-28-97 (DOE G) (Ref. No. 9). Contingency 'cove's costs that may result from incomplete design, unforeseen and unpredictable condition or uncertainties within the defined project scope. The amount of contingency will teper on the status of design, procurement, and construction; and the complexity and uncertainties of the component parts of the project. Contingency is not to be used to avoid making an accurate assessment of expected costs." Energy *Solutions* determines site-specific contingency factors to be applied to each estimate based on industry practices.

The DOE has established a recommended range of contingencies as a function of completeness of program design, DOE G. The ranges are:

Type of Estimate	Contingency Range as a % of Total Estimate
Planning Phase Estimate	20-30
Budget Estimate	15-25
Title I (Preliminary Design Estimate) 10-20
Title II (Definitive Design Estimate)	5-15

Also, the Pacific Gas & Electric Company (PG&E) Technical Position Paper "Establishing an Appropriate Contingency Factor for Inclusion in the Decommissioning Revenue Requirements" (Ref. No. 13) was developed to review and determine a "conservative contingency factor" to be applied to decommissioning cost estimates. In that study it was determined that "based on an understanding of the level of project definition, and the extent and maturity of estimate input that information used to develop decommissioning cost estimates, the 25 percent contingency factor is within the range of industry recognized cost engineering practices."

The contingencies presented in this study are consistent with the values presented in DOE G 430.1-1 for a Planning Phase estimate (Ref. No. 9) and the PG&E study (Ref. No. 13). As directed by SCE, Energy*Solutions* has applied a 25% contingency to all costs in this study, with the exception of following:

2013 and 2014 Actual Expenditures	0%
Department of Navy Easement Payments	15%
Hazardous and Asbestos Wastes	51 %
Site Characterization Surveys	1570
Temporary Facilities	15%
Backfill and Compaction	15%

A reactor decommissioning program will be conducted under an NRC-approved Quality Assurance Program which meets the requirements on 10 CFR 50, Appendix B. However, the development of the quality assurance program the performance of work under that program, and the effort required to ensure compliance with the program, is already included in the detailed cost estimate. Therefore, Energy*Solutions* coes not include quality assurance as an element of the contingency allowance. The same is true for contamination. Where radioactive contamination or activated materials are dealt with the Energy*Solutions* UCFs and associated calculations fully reflect the cost impact of that material, and a separate contingency is not required specifically due to working with contaminatio.

3.7 Cost Reportin_k

Total project costs are *c*² regated from the distributed activity and undistributed costs into the following categories - Labor, Materials and Equipment, Waste Disposal, and Other costs. Other costs include property taxes, insurance, license fees, permits, and energy. Waste Disposal costs are the summation of packaging, transportation, base disposal rate, and any applicable surcharges. Health physics (HP) supplies and small tool costs are calculated as a component of each distributed activity cost and included in the category of Material and Equipment, with the exception that HP supplies for the Utility HP staff are calculated and reported as an undistributed line item. A line item specific contingency is then calculated for each activity cost element.

4.0 SITE SPECIFIC TECHNICAL APPROACH

4.1 Facility Description

The San Onofre Nuclear Generating Station Units 2 & 3 site is located in southern California on the shore of the Pacific Ocean, about 62 miles Southeast of Los Angeles and approximately 51 miles Northwest of San Diego. The station is located entirely within the Camp Pendleton Marine Corps Base. The current Grant of Easement for the site from the United States Department of the Navy will expire May 12, 2023 (Ref. No. 14). Units 2 & 3 occupy 52.8 acres of the 84 acre site. Approximately 16 acres are occupied by the North Industrial Area (formerly Unit 1), which is where the existing ISFSI is located.

The Nuclear Steam Supply System (NSSS) for both units are identical, with two independent loops, and utilizing pressurized light water cooled reactors (PWRs) supplied by Combustion Engineering, Inc. The construction permit was issued for an initial reacted power of 3,390 MWt with licensed Rated Thermal Power of 3,438 MWt.

The facility currently has an existing ISFSI containing st ent fue that was transferred into MPCs to maintain full core offload capability during operations and to facilitate decommissioning of Unit 1. This study also assumes that the MPCs will be lice sect ander a 10 CFR Part 72 general license, using the manufacturer's Certificate of Compliance. The 10 CFR Part 50 license will be maintained until decommissioning is complete ar rate pent fuel has been transferred to DOE.

Appendix A provides a list of the SONGS Un. $2 \propto 3$ systems and structures included in the material inventory for this study.

4.2 Decommissioning Periods

The project periods consist of s. License Termination periods, seven Spent Fuel Management periods (two of which the n.FS. decontamination and demolition periods), and six Site Restoration periods. The project periods defined for this site-specific study and the major activities perform of during each period are as follows:

License Termin rtic 1 Períods

Decon Pd 1 – Transition to Decommissioning

- Defuel Reactors
- Notification of Permanent Fuel Removal
- Disposition of LLRW Resins

Decon Pd 2 – Decommissioning Planning and Site Modifications

- Preparation of Decommissioning License Documents
- Preparation of NRC Deliverables
- Submit PSDAR to NRC
- Perform Historical Site Assessment and Site Characterization
- Planning, Design, and Implementation of Cold & Dark (Site Repowering)
- Design and Implement Spent Fuel Pool Support System Modifications, Control Room Relocation, and Spent Fuel Security System Modifications

Select Decommissioning General Contractor (DGC)

Decon Pd 3 – Decommissioning Preparations and Reactor Internal Segmentation

- DGC Mobilization and Planning
- System Decontamination
- Reactor Internals Removal Preparations
- Reactor Internals Segmentation Planning and Implementation
- Purchase Dry Storage Modules for GTCC Waste
- Segment and Package Reactor Internals for Storage in the ISFSI

Decon Pd 4 – Plant Systems and Large Component Removal

- Upgrade Rail Spur
- Install Large Array Radiation Detection System
- Remove, Package, and Dispose of Non-Essential Systems
- Asbestos and Lead Abatement
- Fuel Pool Closure
- Remove Spent Fuel Racks, Spent Fuel Pool Labord & Juipment, and Bridge Cranes
- Remove and Dispose of Legacy Class B ^c. C Wa. es
- Remove, Package, and Dispose of Essenti, 'Syster's
- Removal and Disposal of Spent Resins, Filte. Mr ...a, and Tank Sludge
- Large Component Removal
- Prepare License Termination Plan

Decon Pd 5 – Building Decontaming 10h

- Decon Containment Building Unus 2 & 3
- Decon Turbine Buildir 3s Um. 2 & 3
- Decon Fuel Handln, "I wildings- Units 2 & 3
- Decon Auxiliary Lady, ste Building
- Decon Auxiliary Ontrol Building
- Decon Pene ratio Buildings-Units 2 & 3
- Decon , afe ' Equ pment and Main Steam Isolation Valve Buildings- Units 2 & 3
- Reconstructures During Decon

Decon F. 6 _ License Termination During Decommissioning

- Final Latus Survey
- ORISE Verification and NRC Approval

Spent Fuel Management Periods

<u>SNF Pd 1 – Spent Fuel Transfer Management Transition</u>

- Implementation of Security Enhancements Required for Reductions in Staff
- Cyber Security Modifications
- Post Fukushima Modifications Unit 2
- Design and Fabricate Spent Fuel Canisters

SNF Pd 2 – Spent Fuel Transfer to Dry Storage

- Prepare Irradiated Fuel Management Plan
- Select Dry Storage System Canister Design and Vendor
- Design and Construct ISFSI Expansion

Purchase, Deliver and Load Spent Fuel Canisters and Transfer to ISFSI

<u>SNF Pd 3 – Dry Storage During Decommissioning Units 1, 2, and 3</u>

<u>SNF Pd 4 – Dry Storage Only – Units 1, 2, and 3</u>

<u>SNF Pd 5 – Dry Storage Only – Units 2, and 3</u>

SNF D&D Pd 1 – ISFSI License Termination

Preparation and NRC Review of License Termination Plan

SNF D&D Pd 2 – ISFSI Demolition

- Verification Survey of Horizontal Storage Modules
- Clean Demolition of ISFSI AHSMs and Pads
- Clean Demolition of ISFSI Support Structures
- Restore ISFSI Site
- Preparation of Final Report on Decommissioning a. 1 Nkc Review

Site Restoration Periods

SR Pd 1 – Transition to Site Restoration

- Severance Costs from Reduction i Staring
- Phase I and II Environmental Assectment of the Mesa Site
- Disposition of Hazardous W: ste a the Me a Site
- Site Characterization of t¹ ? N. 'sa Sue

SR Pd 2 –Building Demolit or During Decommissioning

- Demolish South Acce. for Decommissioning, South Yard Facility, and Mesa Structures
- Finish Grac's and Re-vegetate Mesa Site
- Mesa L, se Term nation

<u>SR P(13 – 5 ubsult ce Demolition Engineering & Permitting</u>

- h, Arc reologic Investigation and Outfall Conduit Survey
- Subsumace Structure Removal Analyses for Lease Termination Activities
- Final Site Grading and Shoreline Protection Engineering Planning and Design
- Obtain Permits and Approvals

<u>SR Pd 4 – Building Demolition to 3 Feet Below Grade</u>

- Demolition Preparations
- Detention and Remove Containment Building Tendons Units 2 & 3
- Demolish Diesel Generator Buildings Units 2 & 3
- Demolish Condensate Buildings and Transformer Pads Units 2 & 3
- Demolish Full Flow Areas and Turbine Buildings Units 2 & 3
- Demolish Auxiliary Radwaste Building
- Demolish Auxiliary Control Building
- Remove Systems and Demolish Make-up Demineralizer Structures
- Demolish Penetration Buildings Units 2 & 3

- Demolish Safety Equipment and Main Steam Isolation Valve Buildings Units 2 & 3
- Demolish Fuel Handling Buildings to 3 Feet Below Grade Units 2 & 3
- Demolish Containment Buildings to 3 Feet Below Grade Units 2 & 3
- Demolish Intake and Discharge Structures to 3 Feet Below Grade

<u>SR Pd 5 – Subgrade Structure Removal Below – 3 Feet</u>

- Install Sheet Piling and Excavation Shoring, Dewatering System, and Effluent Treatment and Discharge Controls
- Demolish and Backfill Unit 3 Subsurface Structures
- Demolish and Backfill Unit 2 Subsurface Structures
- Demolish and Backfill Common Subsurface Structures
- Demolish and Backfill Intake Structure Inside Seawall Beb -3 Feet
- Remove Off Shore Intake and Outfall Conduits
- Remove Sheet Piling, Excavation Shoring, and Devetering and Effluent Treatment
- Finish Grading and Re-vegetate Site

SR Pd 6 - Final Site Restoration and Easement 1, minatic 1

- Obtain Required Permits and Approvals
- Install Dewatering System and Efflucit Treatment and Discharge Controls
- Remove and Stockpile Existing Se twan Erosion Protection
- Remove Unit 2 and 3 Seawall and . edes r. n Walkway
- Remove Remaining Intake S ruct, re Bene th Seawall
- Backfill and Compaction of L cavauon
- Remove Dewatering S stei. & Lffluent Treatment
- Remove Railroad Tracks Gunite Slope Protection, Access Road, and North Parking Lot
- Finish Grading and Re-vegetate Site

4.3 Decommission ng .'taff

Energy*Solutions* a vere 1 staffing based on the assumption that decommissioning will be performed by a e perienced and qualified DGC, with oversight and management of the decommissioning operations performed by the Utility staff. It is also assumed that the Utility staff will be supplemented by a professional consulting engineering firm, particularly in the planning and preparation phase. The sizes of the Utility and DGC staffs are varied in each period in accordance with the requirements of the work activities. Details on the staff levels, by functional group, during each period are provided in Section 6.0.

4.4 Spent Fuel Management Staff

The largest spent fuel staff is in place while the fuel pool is operational during the spent fuel cooling period and the fuel assemblies are being transferred to dry storage. After all spent fuel has been removed from the spent fuel pool, the staff is reduced. During spent fuel pool operations and the dry storage period, the full-time spent fuel management staff is supplemented with part-time staff to support fuel movements. Details on the staff levels, by functional group, during each period are provided in Section 6.0.

4.5 Spent Fuel Shipments

The spent fuel shipping schedules are based in part on the DOE's "Acceptance Priority Ranking & Annual Capacity Report," dated July 2004. (Ref. No. 12). The information regarding existing fuel inventory, planned transfers to dry storage and DOE's projected date of 2024 for acceptance of spent fuel is based on information provided by SCE. The spent fuel shipping schedule is provided in Appendix B. The spent fuel shipment schedule is based upon best current information and assumptions, as qualified and described elsewhere in this study, including in Section 2.2 above.

5.0 BASES OF ESTIMATE AND KEY ASSUMPTIONS

The bases of, and key assumptions for, this site-specific decommissioning estimate are presented below:

- 1. SCE's actual expenses incurred from the time of permanent cessation of operations on June 7, 2013 until December 31, 2013 are included in the estimate. All other cost data used in this study is current as of 2014. Totals and subtotals have been rounded to significant figures.
- 2. Energy*Solutions* developed a prompt dismantlement (DECON) project schedule based on a permanent shutdown date of June 7, 2013.
- 3. The decommissioning will be performed using currently available uphnologies.
- 4. DOE currently has no plans, program, or schedule in face for acceptance of utility spent fuel. However, for purposes of this decommissioning cost estimate, certain simplifying assumptions must be made regarding the schedule and rate of DOE performance. Therefore, while DOE's Standa, 'Contrast governing the acceptance of SCE's spent fuel allows for alternative removely an accurate governing the acceptance of shutdown reactors and exchanges of allocations, for purposes of this estimate DOE acceptance from the industry is assumed to commence in 2024 in accordance with SCE testimony to the Public Utilities Comm. sion of the State of California (Ref. No. 17). The spent fuel shipment schedules are based approximation that the DOE will accept spent fuel at the rate publish d in DOE's July 2004 Acceptance Priority Ranking & Annual Capacity Report (DOE RW 0567) (Ref. No. 12).
- 5. This estimate is base on vite-specific building inventories and plant systems, as provided by Energy Solu. ons.
- 6. All transformers on the following shutdown are assumed to be polychlorinated bipheny CCB, free, therefore, this study does not include costs for disposition of PCB contominated up sformers.
- 7. Cost for transportation of clean scrap metal to a recycler is included in the estimate; however, no credit is taken for the value of the scrap metal. Concrete debris and all other demolition debris is assumed to be removed from the site and disposed of at an out of state Class III landfill, consistent with the Governor of the State of California Executive Order D-62-02 (Ref. No. 16). The cost of installation and operation of Energy*Solutions*' GARDIAN system for bulk radiological assay of all wastes and recyclable materials leaving the SONGS site is included in the estimate. The purpose of the GARDIAN system is to ensure all materials not intended for disposal at a licensed facility meet all applicable requirements.
- 8. The estimate is based on final site restoration, in which all existing and proposed structures, with the exception of the switchyard, will be removed. Clean demolition costs are based on the assumption that all site improvements will be removed in their entirety. Clean backfill will be imported and placed to re-establish grade. The entire

disturbed area of the site is to be graded, to restore the natural grade to the extent possible, and seeded.

- 9. Uncontaminated lead shielding remaining is assumed to be removed from its installed locations and shipped offsite by entities having a need for the material. The entities receive the lead at no charge in return for providing the removal and shipping services.
- 10. Site-specific information regarding contaminated soil was used as a basis for calculation of current costs for their remediation. While no known radiological or chemical remediation is required at the switchyard or the Mesa, those areas will be addressed as part of the Baseline Characterization Survey and Historical Site Assessment.
- 11. Costs for hazardous waste disposal, as well as asbestos and 1 ad abatement, are included in this study.
- 12. All Class A waste is assumed to be disposed of a Energy Solutions' facility in Clive, Utah, in accordance with the existing Life of Plan, Dr. posal Agreement between Energy Solutions and Southern California Edisc dated anuary 18, 2014 (Ref. No. 7). The following 2014 disposal rates will be applied:

Demolition Debris and Soi - \$5 97/Cubic Foot plus 5% Utah taxes Oversized Debris - \$111 31. Cubi : . Toot plus 5% Utah taxes Containerized Waster fact. 'v - \$21 r.50/Cubic Foot plus 12% Utah taxes Large Component - \$189.87/Cubic Foot plus 5% Utah taxes Cask Shipment - \$-1.05.7/Cask plus 12% Utah taxes

Class A waste includes L v Active Waste (DAW) arising from the disposal of contaminated protective clothing and health physics supplies.

- 13. Class B, C, a d CTCC waste disposal costs are based on recent quotes for disposal of activated and resins at the WCS facility. All resins and filter waste is assumed to be C ss B.
- 14. Shipping costs for the Class B and C waste are based on a distance of 1,079 miles one way from SONGS to the WCS site.
- 15. GTCC is not subject to the same storage and security requirements as spent fuel and therefore is not required to be stored on the ISFSI pad. But for purposes of this estimate and to facilitate decommissioning, GTCC waste generated from the segmentation of the reactor internals is assumed to be packaged in Dry Storage Canisters (DSCs) and placed in Advanced Horizontal Storage Modules (AHSMs) in the ISFSI to await final disposition at a DOE repository.
- 16. It is assumed that a total of six DSCs per unit will be required for GTCC waste.

- 17. Reactor vessel and internals curie estimates were derived from the values for the Reference PWR vessel and internals in NUREG/CR-0130 (Ref. No. 5). These values were adjusted for decay period.
- 18. The Energy*Solutions* site-specific classification of radioactive wastes for the SONGS Plant identified that the spent fuel assemblies and two components within the reactor vessel (the Core Shroud Assembly and the Lower Core Grid Plate) will exceed Class C limitations.
- 19. The spent fuel shipments are based upon best current information and assumptions, as qualified and described elsewhere in this study, including in Section 2.2. above.
- 20. Spent fuel will remain in the spent fuel pool for six years before sing ransferred to the ISFSI.
- 21. The costs for ISFSI construction and transfer of spent del for Units 2 & 3 to dry storage were developed by SCE and furnished to Energy solutions. Following completion of spent fuel transfers to dry storage the cut of maintenance and operation of the ISFSI is distributed between Units 1, 2 and 3 base 1 on the relative percentages of spent fuel assemblies in storage. The percentages read, 45, and 45 for Units 1, 2, and 3, respectively. The exception is that all reoperty taxes are solely the liability of Units 2 & 3. Following completion of SNF d 4 Dry Storage Only Units 1, 2, and 3, all ISFSI maintenance and operating costs are soled to Units 2 & 3 until the ISFSI D&D. During ISFSI D&D costs are soled to units 2 & 3 until the same percentages of 10, 45, and 45.
- 22. DOE has not committed a compt SCE's canistered spent fuel, which DOE classifies as non-standard. But for purperes of this estimate, it is assumed that an SCE-funded dry storage facility will not a necessary.
- 23. Costs for ISF 'I a moli ion are included in this estimate. SCE assumes that portions of the ASE y, convrete will be activated.
- 24. Energy *In ions* has assumed that the 10 CFR Part 50 license will be maintained until DOE has taken possession of the spent fuel.
- 25. SCE's annual ISFSI insurance premiums of \$302,000 are assumed to be incurred until all fuel shipments have been completed and the structure is no longer in use.
- 26. SCE's Emergency Preparedness (FEMA) fees of \$500,000 per year and California Office of Emergency Services fees of \$2,800,000 per year are applied until the spent fuel pool is empty. These fees were supplied by SCE.
- 27. SCE's current annual property taxes are assumed to be reduced to a constant \$1,500,000 per year. The property taxes are a license termination expense until the completion of decommissioning, and then a spent fuel management expense until completion of the ISFSI D&D.

- 28. Energy*Solutions* has included the annual NRC 10 CFR 171.15(c)(2) fees, for reactors in decommissioning of \$231,000/yr per unit until decommissioning is completed as a license termination expense. Following completion of decommissioning, this expense is continued as a spent fuel management cost for maintenance of the 10 CFR Part 50 license.
- 29. Energy*Solutions* has included Environmental Permits and Fees of \$1,900,000 per year as supplied by SCE.
- 30. Energy*Solutions* has included NRC inspection fees during each decommissioning period based on the type and level of activities being performed.
- 31. SONGS annual insurance premiums, in 2014 dollars as sup ted by SCE, are as follows:

Nuclear Property Primary - \$4,878,099 Nuclear Liability - \$1,151,075 Additional Liability, Non-Nuclear - \$2,576,19 Workers' Compensation - \$180,325 Property Insurance - \$353,286

The premium amounts have been adjust d by Energy*Solutions* in accordance with information furnished by SCE to meet t' e req_irements of each period.

- 32. Site operating expenses expected to be ocurred during decommissioning and spent fuel management are included in the estimate. These costs include materials and services, utilities (water, gas, phone) tele on innunications equipment, non-process computers, personal computers and to a and equipment. These costs were calculated based on information provided by CE and adjusted by EnergySolutions to match the requirements of each period, based on staffing levels.
- 33. Site Lease and Caser ent expenses of \$2,300,000 per year until the Mesa lease is terminance are included in the estimate. Following termination of the Mesa lease the site lease and comment expenses are reduced to \$299,920 per year. These costs are based on in ormation provided by SCE.
- 34. Utility staff positions and average direct burdened salary data in 2014 dollars were supplied by SCE.
- 35. Severance costs for those employees terminated as a result of SONGS decommissioning, including those costs required under California law are included in the estimate. Severance costs for Reductions-in-Force (RIFs) that occurred immediately after shutdown, and during the course of spent fuel management and decommissioning are assumed to be a site restoration expense and are included in the estimate.
- 36. Severance costs per employee were provided by SCE.

- 37. DGC staff salaries, including overhead and profit, were determined by Energy*Solutions* and represent Energy*Solutions*' standard assumptions for these rates.
- 38. The professional personnel used for the planning and preparation activities, and DGC personnel, are assumed to be paid per diem at the rate of \$204/day, based on per diem rates from U.S. General Services Administration (GSA) for Orange County, California.
- 39. Craft labor rates were taken from the CA Union Craft Rate Sheet, dated January 9, 2014. Craft labor rates for disciplines not provided in the rate sheet have been taken from the 2014 RS Means Labor Rates for the Construction Industry (Ref. No. 10), for Anaheim, CA. Since the skilled laborers are assumed to be supplied by the local union hall, they will not be paid per diem.
- 40. The security guard force included in this estimate has been sized in coordance with the current Design Basis Threat assessment.
- 41. This study follows the occupational exposure principles of As Low As Reasonably Achievable (ALARA) through the use of productivity. ss. ctors that incorporate such items as the use of respiratory protection and person lel protective clothing. These factors increase the work duration and cost.
- 42. The costs of all required safety analyses and safety measures for the protection of the general public, the environment, and decomm scioning workers are included in the cost estimates. This reflects the requirement of:

10 CFR 20	Standar s fo. Protection Against Radiation		
10 CFR 50	Dr nest. Licensing of Production and Utilization Facilities		
10 CFR 61	Licensing Requirements for Land Disposal of Radioactive Waste		
10 CF	Packaging of Radioactive Material for Transport		
10 Cr ? 7?	Licensing Requirements for the Independent Storage of Spent Nuclear Fuel and High-Level Radioactive Waste		
29 CFR 1910	Occupational Safety and Health Standards		
49 CFR 170-189	Department of Transportation Regulations Governing the Transport of Hazardous Materials		
Reg. Guide 1.159	Assuring the Availability of Funds for Decommissioning Nuclear Reactors		

43. Activity labor costs do not include any allowance for delays between activities, nor is there any cost allowance for craft labor retained on site while waiting for work to become available.

6.0 STUDY RESULTS

This study analyzes the following technical approach to decommissioning as defined by SCE:

- Prompt DECON methodology.
- Permanent cessation of operations on June 7, 2013.
- Termination of spent fuel pool operation six years after permanent shutdown.
- Spent fuel will be stored in MPCs at an on-site ISFSI.
- A dry transfer facility will not be necessary.
- Decommissioning will be performed by SCE and a DGC.
- LOP Disposal Rates are used for Class A LLRW.
- WCS Texas Disposal Rates are used for Class B and C LLF W.
- DOE begins accepting spent fuel from the industry in 2024.

Spent Fuel Shipping Schedule

The spent fuel shipping schedule is provided in Appendix B. 'bent fuel shipments from the industry to DOE will begin in 2024. The spent fuel singuent schedules are based upon best current information and assumptions, as qualified and described elsewhere in this study, including in Section 2.2 above.

Cost and Schedule

Figure 6-1 is a summary project schedule A detailed schedule is provided in Appendix C. Table 6-1 summarizes the period durations and total costs, including contingency, for License Termination, Spent Fuel, and Site R stortion activities. A detailed cost table is provided in Appendix D, and a table of annual x1 and tures is provided in Appendix E.

Project Staffing

This scenario is base to the assumption that decommissioning will be performed by an experienced and value C, with oversight and management of the decommissioning operations performed C, be Utility staff. Utility staffing levels, by organizational department and function, C with oversight in Table 6-2. The DGC staffing levels, by organizational department and function, for each period are provided in Table 6-3.

Waste Disposal Volumes

Waste disposal is a significant element of the decommissioning project. The estimated cubic feet of waste are summarized as follows:

Waste Class	Unit 2	Unit 3	Total
Class A	1,832,961	1,819,680	3,652,640
Class B	7,600	7,600	15,199
Class C	4,095	4,095	8,191
GTCC	941	941	1,882

Waste disposal volumes and costs, itemized by packaging, transportation, surcharges and disposal costs by waste class and facility, are provided in Table 6-4. The waste disposal costs provided in Table 6-4 do not include contingency.

Figure 6-1 Summary Schedule

DECON with Dry Storage, 2013 Shutdown and DOE Acceptance in 2024

Task Name	Start	Finish	1 2 3 4 5 6 7 8 9 1011121 415 13 33 9 40 11 12 1 415 13 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40
Post-Shutdown Spent Fuel Management	06/07/2013	09/08/2051	
Spent Fuel Shipping Complete - Unit 1	12/31/2035	12/31/2035	♦ 12/31
Spent Fuel Shipping Complete - Units 2 & 3	12/31/2049	12/31/2049	12/31
SNF Pd 1 - Spent Fuel Management Transition	06/07/2013	12/31/2013	
SNF Pd 2 - Spent Fuel Transfer to Dry Storage	1/1/2014	06/01/2019	
SNF Pd 3 - Dry Storage During Decommissioning - Units 1, 2 and 3	06/01/2019	12/05/2031	
SNF Pd 4 - Dry Storage Only - Units 1, 2 and 3	12/05/2031	12/31/2035	
SNF Pd 5 - Dry Storage Only - Units 2 and 3	12/31/2035	12/31/2049	
SNF D&D Pd 1 - ISFSI D&D Planning	12/31/2049	05/06/2050	
SNF D&D Pd 2 - ISFSI D&D	05/06/2050	09/08/2051	
Part 50 License Termination	06/07/2013	12/24/2032	
Announcement of Cessation of Operations (June 7, 2013)	06/07/2013	06/07/2013	6/7
Decon Pd 1 - Transition to Decommissioning	06/07/2013	12/31/2013

Appendix C

Detailed Project Schedule

	Task Name	Duration	Start	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41
	Post-Shutdown Spent Fuel Management	9982 days	06/07/2013	· · · · · · · · · · · · · · · · · · ·
2	Spent Fuel Shipping Complete - Unit 1	0 days	12/31/2035	●12/31
3	Spent Fuel Shipping Complete - Units 2 & 3	0 days	12/31/2049	◆ 12/31
4	SNF Pd 1 - Spent Fuel Management Transition	149 days	06/07/2013	
5	SNF Pd 1 Begins	0 days	06/07/2013	
6	Security Enhancements	45 days	10/31/2013	
7	Design and Fabricate Spent Fuel Canisters	120 days	06/07/2013	
8	Post Fukushima Modifications - Unit 2	148 days	06/07/2013	
9	Post Fukushima Modifications - Unit 3	148 days	06/07/2013	
10	Cyber Security Modifications	148 days	06/07/2013	
11	SNF Pd 1 Ends	0 days	01/01/2014	
12	SNF Pd 2 - Spent Fuel Transfer to Dry Storage	1413 days	1/1/2014	
13	SNF Pd 2 Begins	0 days	01/01/2014	
14	Security Enhancements	60 days	01/02/2014	
15	Prepare Irradiated Fuel Management Plan	118 days	01/02/2014	
16	Decay Heat Analysis	85 days	01/02/2014	
17	Zirconium Fire and Shine Analysis	42 days	01/02/2014	
18	Issue Irradiated Fuel Management Plan	0 days	09/16/2014	16
19	NRC Review of Irradiated Fuel Management Plan	82 days	09/17/2014	
20	ISFSI Expansion	513 days	01/02/2014	
21	Select Dry Storage System Canister Design and Vendor	30 days	01/01	
22	ISFSI Pad Study	220 d <i>a`'s</i>	07. 3/2014	
23	Design ISFSI Expansion	120 days	06, 1/2014	
24	ISFSI Permit Approved By California Coastal Commission	0 davs	<u>\4/11</u> /. 15	4/11
25	Construct ISFSI Expansion	180 d /s	0 4/2015	
26	Canister Purchase, Fabrication and Fuel Tranfer	1, `d ~	12/05/2014	
27	Purchase Spent Fuel Canisters and AHSMs - Unit 2	220 /s		
28	Purchase Spent Fuel Canisters and AHSMs - Unit 3	220 da,	12/09/2014	
29	Load Spent Fuel Canisters and Transfer to ISFSI - Unit 2	`00 days	12/22/2015	
30	Load Spent Fuel Canisters and Transfer to ISFSI - Unit 3	9t days	12/22/2015	
31	Unit 2 Spent Fuel Pool Empty	0 days	06/01/2019	6/1
32	Unit 3 Spent Fuel Pool Empty	0 days	06/01/2019	6/1
33	SNF Pd 2 Ends	0 days	06/01/2019	♦ _6/1
34	SNF Pd 3 - Dry Storage During Decommissioning - Units 1, 2 nd 3	3265 days	06/01/2019	
35	SNF Pd 3 Begins	0 days	06/01/2019	· → ◆ 6/1
36	SNF Pd 3 Ends	0 days	12/05/2031	12/5
37	SNF Pd 4 - Dry Storage Only - Units 1, 2 and 3	1061 days	12/05/2031	
38	SNF Pd 4 Begins	0 days	12/05/2031	▶ 12/5
39	SNF Pd 4 Ends	0 days	12/31/2035	12/31
40	SNF Pd 5 - Dry Storage Only - Units 2 and 3	3654 days	12/31/2035	
41	SNF Pd 5 Begins	0 days	12/31/2035	12/31
42	SNF Pd 5 Ends	0 days	12/31/2049	12/31
43	SNF D&D Pd 1 - ISFSI D&D Planning	90 days	12/31/2049	
44	SNF D&D Pd 1 Begins	0 days	12/31/2049	12/31
45	Preparation and NRC Review of License Termination Plan	90 days	01/01/2050	
46	SNF D&D Pd 1 Ends	0 days	05/06/2050	<u></u> 5/6
47	SNF D&D Pd 2 - ISFSI D&D	350 days	05/06/2050	

ID 48					6 7 8 9 10 11 12 13 14 15 16 17 18 1	19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 3	38 39 40 41
	Task Name SNF D&D Pd 2 Begins	Duration 0 days	Start 05/06/2050	1 2 3 4 3			5/6
49	Install GARDIAN Bulk Assay System	30 days	05/07/2050				
50	Decon AHSMs	90 days	05/07/2050	1			
51	Final Status Survey of ISFSI	120 days	05/28/2050	-			
52	Clean Demolition of ISFSI AHSMs and Pad	145 days	09/10/2050	-			Ĭ.
53	Clean Demolition of ISFSI Support Structures	120 days	10/15/2050				
54	Restore ISFSI Site	55 days	04/01/2051				Ē.
55	Preparation of Final Report on Decommissioning and NRC Review	60 days	06/17/2051				Ē.
56	SNF D&D Pd 2 Ends - License Termination Complete	0 days	09/08/2051				9/8
57	Post-Shutdown Spent Fuel Management Complete	0 days	09/08/2051				9/8
	Part 50 License Termination	5102 days	06/07/2013				
59	Announcement of Cessation of Operations (June 7, 2013)	0 days	06/07/2013	6/7			
60	Decon Pd 1 - Transition to Decommissioning	149 days	06/07/2013				
61	Decon Pd 1 Begins	0 days	06/07/2013				
62	Certification of Permanent Cessation Submitted to NRC (June 12, 2013)	0 days	06/07/2013	6/7			
63	Defuel Unit 3 Reactor	15 days	06/07/2013				
64	Defuel Unit 2 Reactor	15 days	06/07/2013				
65	Notification of Permanent Fuel Removal (July 23, 2013)	0 days	06/27/2013				
66	Disposition of Legacy Wastes	60 days	07/19/2013				
67	Decon Pd 1 Ends	0 days	01/01/2014	1/1			
68	Decon Pd 2 - Decommissioning Planning and Site Modifications	389 days	1/1				
69	Decon Pd 2 Begins	0 w'rs	01 1/2014				
70	Preparation of Decommissioning License Documents	340 days	01, '2014				
71 72	Develop Certified Fuel Handler Program	340 dəvs	1/02/. 14				
72	Prepare Post-Shutdown QA Plan	340 d /s	0. 2/2014 01/0∠/2014				
73	Prepare Post-Shutdown Security Plan Prepare Post-Shutdown Fire Protection Plan	340 /s	01/02/2014				
74	Prepare Defueled Radiation Protection Manual	340 /s 340 da,	01/02/2014				
75	Prepare Preliminary Defueled Technical Specifications	63 days	01/02/2014				
77	NRC Deliverables	36 Jays	01/02/2014				
78	Prepare Defueled Safety Analysis Report (DSAR)	30 Jays 311 days	01/02/2014				
79	Submit DSAR to NRC	0 days	03/12/2014	3/12			
80	Implement Technical Specification Modifications	30 days	03/13/2015	5/12			
81	Prepare Post-Shutdown Emergency Preparedness Plan	304 days	01/02/2014				
82	Submit Emergency Plan to NRC	0 days	03/03/2015	3/3			
83	NRC Review of Emergency Plan	60 days	03/04/2015	₩			
84	Prepare Post-Shutdown Decommissioning Activities Report DAR)	121 days	01/02/2014				
85	Submit PSDAR to NRC	0 days	06/19/2014	6/19			
86	NRC Review of PSDAR	90 days	06/20/2014				
87	Public Meeting on PSDAR	30 days	08/01/2014				
88	Prepare Decommissioning Cost Estimate (DCE)	160 days	01/02/2014				
89	Submit DCE to NRC	0 days	08/13/2014	8/13			
90	NRC Review of Decommissioning Cost Estimate	90 days	08/14/2014				
91	Commencement of Major Decommisisoning Activities Allowable	0 days	10/23/2014	10/23			
92	Respond to NRC quesitons on PSDAR	220 days	06/20/2014				
93	Disposition of Legacy Wastes	220 days	01/02/2014				
94	Contract Award for Historic Site Assessment and Site Characterization	0 wks	01/16/2014	1/16			

ID	Task Name	Duration	Start	1 2	3 4 5	6 7 8	9 10 11 12 13 14 15 16 17 1	8 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41
95	Perform Historic Site Assessment and Site Characterization	180 days	01/17/2014	Ĺ				
96	Planning and Design For Cold and Dark	90 days	02/01/2014	H				
97	Implement Cold and Dark (Repower Site)	275 days	06/07/2014					
98	Install 12kV Service Line to Power Temporary Power Ring	90 days	02/21/2015	L				
99	Drain and De-Energize Non-Essential Systems (DEC Process)	260 days	01/02/2014	Ī				
100	Select Decommissioning General Contractor (DGC)	318 days	04/11/2014		İ-			
101	Spent Fuel Pool Isolation	318 days	04/11/2014					
102	Design Spent Fuel Pool Support System Modifications	160 days	04/11/2014		1			
103	Design Control Room Relocation	125 days	04/11/2014	→				
104	Design Spent Fuel Security System Modifications	130 days	04/11/2014					
105	Install Spent Fuel Pool System Modifications - Unit 2	66 days	11/21/2014					
106	Install Spent Fuel Pool System Modifications - Unit 3	66 days	02/21/2015					
107	Spent Fuel Pool Island System Training	10 days	05/26/2015			1		
108	Implement Control Room Modifications	185 days	10/03/2014	ļ				
109	Implement Spent Fuel Pool Security Modifications	180 days	10/10/2014					
110	Transition Project Modifictations	262 days	06/28/2014					
111	DGC Contract Award	0 days	06/30/2015		6/30			
112	Decon Pd 2 Ends	0 wks	06/30/2015		6/30			
113	Decon Pd 3 - Decommissioning Preparations and Reactor Internals Segmentati	1024 days	06/30/2015					
114	Decon Pd 3 Begins	0 days	06/30/2015	4	∳ -f⇒			
115	DGC Mobilization and Planning	160 days	07/٢					
116	Prepare Integrated Work Sequence and Schedule for Decommissioning	90 da 's	1/2015					
117	Prepare Detailed Work Procedures for Decommissioning	160 days	07, /2015	Π.				
118	Planning and Design of Primary System Decontamination	135 dav/s	7/01/. 15					
119	Planning and Design of Infrastructure Improvements	60 d /s	0, 1/2015					
120	Design Containment Access Modifications	ام الم	07/01/2015		<u>H</u>			
121	System Decon	400 /s	v ı/06/2016			'		
122	Perform Primary System Decon- Unit 2	140 da,	01/06/2016					
123	Perform Primary System Decon- Unit 3	40 days	07/20/2016			-		
124	Hot Spot Decontamination - Unit 2	t days	02/01/2017					
125	Hot Spot Decontamination - Unit 3	60 days	04/26/2017					
126	Rx Internals Removal Preparations	255 days	09/23/2015					
127	Modify Containment Access- Unit 2	90 days	09/23/2015					
128	Modify Containment Access- Unit 3	90 days	01/27/2016					
129	Remove and Dispose of Missle Shields - Unit 2	30 days	01/27/2016					
130	Remove and Dispose of Reactor Head - Unit 2	45 days	03/09/2016					
131	Remove and Dispose of Missle Shields - Unit 3	30 days	06/01/2016			1		
132	Remove and Dispose of Reactor Head - Unit 3	45 days	07/13/2016					
133 134	Reactor Internals Segmentation Planning and Implementation	1020 days	07/01/2015		¥+			
	Finalize Residual Radiation Inventory (Rx Vessel & Internals)	65 days						
135 136	Prepare Activity Specification for Rx Vessel and Internals Segmentation Select Shipping Casks and Obtain Shipping Permits	120 days	09/30/2015					
		60 days						
137 138	Design, Specify, and Procure Special Items and Materials Purchase Dry Storage Modules for GTCC Waste - Unit 2	175 days	03/16/2016		╻╇╹			
138		90 days			+			
139 140	Purchase Dry Storage Modules for GTCC Waste - Unit 3	90 days	07/01/2015					
140	Test Special Cutting and Handling Equipment and Train Operators	60 days	02/08/2017		🌵			
141	Finalize Internals and Vessel Segmenting Details - Unit 2	30 days	02/08/2017					

ID	Task Name	Duration	Start	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41
142	Segment, Package and Dispose of Reactor Internals - Unit 2	240 days	03/22/2017	
143	Transfer Internals Segmentation Equipment to Unit 3	60 days	02/21/2018	
144	Finalize Internals and Vessel Segmenting Details - Unit 3	30 days	05/16/2018	
145	Segment, Package and Dispose of Reactor Internals - Unit 3	240 days	06/27/2018	
146	Construct new change rooms, hot laundry, in-plant laydown areas	90 days	01/29/2019	
147	Procure Non-Engineered Standard Equipment	120 days	12/18/2018	
148	Decon Pd 3 Ends	0 wks	06/01/2019	6/1
149	Decon Pd 4 - Plant Systems and Large Component Removal	865 days	06/01/2019	
150	Decon Pd 4 Begins	0 days	06/01/2019	
151	Upgrade Rail Spur	120 days	06/04/2019	
152	Install GARDIAN Bulk Assay System	30 days	06/04/2019	
153	Non Essential System Removal	640 days	07/16/2019	
154	Scaffolding for Non-Essential System Removal	120 wks	07/16/2019	
155	Asbestos Abatement for Non-Essential Systems Removal - Unit 2	60 wks	07/16/2019	
156	Lead Abatement for Non-Essential Systems Removal - Unit 2	60 wks	07/30/2019	
157	Remove, Package and Dispose of Non-Essential Systems - Unit 2	60 wks	09/10/2019	
158	Asbestos Abatement for Non-Essential Systems - Unit 3	60 wks	09/08/2020	
159	Lead Abatement for Non-Essential Systems - Unit 3	60 wks	09/22/2020	
160	Remove, Package and Dispose of Non-Essential Systems - Unit 3	60 wks	11/03/2020	
161	Remove Underground Diesel Tank - Unit 2	30 days	07/16/2019	
162	Remove Underground Diesel Tank - Unit 3	30 days	08/2	
163	Fuel Pool Closure	300 də [.] 's	<u>(</u> ¹ /2019)	
164	Remove and Dispose of Spent Fuel Storage Racks - Unit 2	90 days	06, 1/2019	
165	Remove and Dispose of Spent Fuel Storage Racks - Unit 3	90 dəvs	10/08/. 19	
166	Remove and Dispose of Legacy Class B and C Waste - Unit 2	30 d /s	1. 8/2019	
167	Remove and Dispose of Legacy Class B and C Waste - Unit 3	nd m	11/15/2019	
168	Drain Spent Fuel Pool and Process Liquid Waste - Unit 2	2. (S	19/2019	
169	Drain Spent Fuel Pool and Process Liquid Waste - Unit 3	24 w.	12/31/2019	
170	Segment, Package and Dispose of Spent Fuel Pool Island Equipment	30 days	06/16/2020	
171	Segment and Dispose of Fuel Pool Bridge Crane - Unit 2	days	10/08/2019	
172	Segment and Dispose of Fuel Pool Bridge Crane - Unit 3	30 days	11/19/2019	
173	Essential Systems Removal	180 days	06/16/2020	
174	Flush and Drain Essential Systems Following Fuel Pol Courre	30 days	06/16/2020	
175	Scaffolding for Essential System Removal	30 wks	07/28/2020	
176	Asbestos Abatement for Essential Systems	30 wks	07/28/2020	
177	Lead Abatement for Essential Systems Removal	30 wks	07/28/2020	
178	Remove, Package and Dispose of Essential Systems	30 wks	07/28/2020	
179	Removal and Disposal of Spent Resins, Filter Media and Tank Sludge	30 days	01/12/2021	
180	Large Component Removal	865 days	06/04/2019	
181	Reactor Vessel Insulation Removal and Disposal - Unit 2	90 days	06/04/2019	
182	Segment, Package and Dispose of Reactor Pressure Vessel - Unit 2	260 days	06/04/2019	
183	Transfer Rx Vessel Segmentation Equipment to Unit 3	45 days	06/02/2020	
184	Procure Replacement Non-Engineered Standard Equipment	30 days	06/02/2020	
185	Reactor Vessel Insulation Removal and Disposal - Unit 3	90 days	08/04/2020	
186	Segment, Package and Dispose of Reactor Pressure Vessel - Unit 3	260 days	08/04/2020	
187	Remove and Dispose of Steam Generators - Unit 2	240 days	06/02/2020	
188	Remove and Dispose of Pressurizer - Unit 2	60 days	05/04/2021	

ID	Task Name	Duration	Start	1 3	23	4 5 6 7 8 9 10	1 12 13 14 15 16 17 18	3 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 3	8 39 40 41
189	Remove and Dispose of Steam Generators - Unit 3	240 days	08/03/2021		ĨĬ				0 00 10 11
190	Remove and Dispose of Pressurizer - Unit 3	60 days	07/05/2022						
191	Remove and Dispose of Turbine Gantry Crane - Unit 2	140 days	05/04/2021			Ĩ,			
192	Remove and Dispose of Turbine Gantry Crane - Unit 3	140 days	11/16/2021						
193	Prepare License Termination Plan	26 wks	03/01/2022						
194	Decon Pd 4 Ends	0 days	09/24/2022				9/24		
195	Decon Pd 5 - Building Decontamination	470 days	09/24/2022			ŤŤ			
196	Decon Pd 5 Begins	0 days	09/24/2022			L.	9/24		
197	Unit 3	305 days	09/27/2022			, te de la constante de la const			
198	Decon Containment Building - Unit 3	150 days	09/27/2022			The second se			
199	Decon Penetration Building - Unit 3	85 days	04/25/2023						
200	Decon Safety Equipment and MSIV Building - Unit 3	70 days	08/22/2023						
201	Decon Fuel Handling Building - Unit 3	65 days	09/27/2022				din l		
202	Decon Turbine Building - Unit 3	30 days	09/27/2022			- L			
203	Unit 2	425 days	11/08/2022						
204	Decon Containment Building - Unit 2	150 days	04/25/2023						
205	Decon Penetration Building - Unit 2	85 days	11/21/2023						
206	Decon Safety Equipment and MSIV Building - Unit 2	70 days	03/19/2024						
207	Decon Fuel Handling Building - Unit 2	65 days	12/27/2022						
208	Decon Turbine Building - Unit 2	30 days	11/08/2022				1		
209	Common	470 days	۲ 09 <i>/2</i>						
210	Decon Auxiliary Radwaste Building - Common	120 da /s	03 8/2023				<u>í</u> .11		
211	Decon Auxiliary Control Building - Common	20 days	09, 1/2023		$1 \sim$				
212	Decon Condensate Area and Tunnels - Units 2 and 3	80 də'/s	<u>9/12</u> ، 73						
213	Excavate, Remove and Dispose of Yard Area Drains	60 d /s	0. ?/2024						
214	Remove and Dispose of Contaminated Sumps, Trenches and Pavement	nd m	01/0∠/2024						
215	Remove and Dispose of Radiologically Contaminated Soil	30 /s	0.3/26/2024						
216	Dispose of Contaminated Decon Equipment and Tooling	15 da,	06/25/2024						
217	Radiological Survey of Structures During Decon	10 days	09/27/2022
