

Marni Magda

Marni Magda has lived in Southern California for over sixty years. She is a retired community college professor, a writer, and a concerned environmental activist. She belongs to the Sierra Club, the NRDC, Friends of the Earth, Laguna Foundation, Friends of Harbors, Beaches and Parks, Surfrider, and Save the Redwoods. She admires the efforts of these organizations to curb urban sprawl, to force open space alternatives to the massive destruction of our last undeveloped lands, and to protect our endangered national, state and county parks.

Magda began researching commercial nuclear reactors and irradiated fuel management after her own close call with Fukushima in March 2011. Since then she has attended meetings and participated in webcasts held by the NRC, DOE, SCE, CEP, and NWTRB and seeks removal of all spent nuclear fuel from the coast of California. Understanding the taxpayers' financial burden for the back end of nuclear waste management, she supports a bipartisan revision of the Nuclear Waste Act of 1982 that will allow the DOE to give priority to safeguard the nation's stranded spent nuclear fuel away from people and environmental hazards.
